95% Incident Reduction ■ 232M+ Records Protected ■ \$2M+ Annual Savings ■ Resolution: 20-100h to <4h ■ \$10M+ ARR

EXECUTIVE SUMMARY

Data & Analytics leader with 15+ years of experience building enterprise data platforms, governance operating models, data quality controls, and AI-ready data foundations for regulated, high-volume businesses. Proven ability to turn fragmented data ecosystems into scalable platforms, trusted metrics, reusable data products, and executive decision intelligence. Combines technical credibility across cloud, SQL, metadata, ingestion, reconciliation, and DataOps with commercial orientation, stakeholder leadership, and team scaling across global delivery environments. Most recently designed and shipped two governed RAG systems solo - golden-record entity resolution and an ABSTAIN-by-design healthcare prior-authorization assistant - as live public demos with a production API.

"Metric driven and extraordinarily accountable" - Ken Bouley, Direct Manager, FICO Executive Leadership | **15 SPOT Awards** | **11 LinkedIn Recommendations**

CORE COMPETENCIES

GOVERNANCE: Data Technology Control Governance | Data Governance Frameworks | DAMA DMBOK | Technology Controls | Application / Information / Data Owner Models | Runbooks & Best Practices

LEADERSHIP: Cross-LOB Stakeholder Influence | Executive Forums | Issue Escalation & RCA | Audit-Ready Evidence | Team Leadership (25+ Engineers)

PLATFORMS & REGULATORY: Microsoft Purview | Collibra | ServiceNow | AWS | Python | SQL | CI/CD | Data Lineage | SOX | GDPR | DPDP | SOC 2 / ISO 27001

DATA & ANALYTICS: Data Strategy | Data Products | Semantic Layer | Trusted Metrics | BI & Executive Analytics | Forecasting Foundations | Data Modelling | Warehousing | Multi-Tenant Data Platforms | Commercial Insights | Informatica | Collibra

AI & GENAI: RAG Architecture | Entity Resolution & Golden Records | LLM & Model-Risk Governance | Anthropic Claude & MCP | Vector Search | EU AI Act Readiness | Responsible AI Controls

PROFESSIONAL EXPERIENCE

FAIR ISAAC CORPORATION (FICO)

Oct 2016 - Mar 2025

Enterprise Data Platform | Bengaluru, India (+ Teams in US & Canada)

Senior Engineer — Senior IC (lateral move, at my request)

Oct 2024 - Mar 2025

- Moved at my own request to the senior IC track (Senior Engineer, same grade, compensation unchanged) to support a family caregiving responsibility — awarded the FY24 merit increase and full bonus in Dec 2024; delivered six major DPL/ADE releases on schedule plus COGS-reduction work; resigned Dec 2024 and served the full 90-day notice through Mar 2025 — a planned, good-standing exit.

Senior Manager, Data Management — Enterprise Data Platform

Jun 2022 - Sep 2024

- Owned data technology control governance for 50+ financial-services clients (metadata, quality, reliability, AI-readiness); cut control-related incidents 95% within three months, ServiceNow-tracked against an unchanged incident taxonomy.
- Authored the Application / Information / Data Owner accountability model adopted across FICO's lines of business, making named data ownership a working precondition for platform onboarding and control signoff.
- Designed and shipped the metadata-driven data quality framework (metadata validation, anomaly detection, ServiceNow escalation, RCA evidence packs, preventive quality contracts), cutting incident resolution from 20-100 hours to under 4 hours across the 50+ client platform.
- Designed the metadata-driven onboarding controls that automated schema validation and configuration on the \$10M+ ARR platform; end-to-end client onboarding fell from a 4-week average to 2-3 days with zero custom rework.

- Established trusted data definitions and reconciliation gates across executive reporting, cutting reconciliation breaks and eliminating executive-metric restatements.
- Eliminated \$2M+ per year in recurring failure costs by designing out the highest-frequency failure classes, quantified from incident-hours x loaded cost.

Manager

Dec 2018 - Jun 2022

- Governed enterprise metadata and validation platforms (AWS Athena, Python); designed ingest-time quality checks that cut pipeline incidents 50% within three months.
- Designed the CI/CD quality gates and SLA-driven reconciliation controls for 75 GB+ batch and 2.5M-3M API-call cycles; catching failures pre-release improved engineering velocity ~50%.
- Built client-facing control dashboards enabling clients to detect and triage data issues before escalating; downstream escalations fell 45% after rollout.

Lead / Associate Manager

Oct 2016 - Dec 2018

- Designed the PII-protection, access-control, and reconciliation architecture across 100+ data paths; the same architecture scaled to protect 232M+ regulated records per cycle at 10K TPS.

HCL TECHNOLOGIES

Apr 2015 - Oct 2016

Technical Lead, Data Migration, Reconciliation & Enterprise Integration

- Designed Guidewire Insurance Suite data-migration and reconciliation frameworks (staged mock-cutovers, automated reconciliation checks) reused across BFSI engagements; this reconciliation-first pattern became the foundation I later industrialized into FICO's SLA-driven reconciliation controls.

EY (ERNST & YOUNG) | COGNIZANT | RR DONNELLEY

Jul 2009 - Mar 2015

Associate Tech Lead / Programmer Analyst / Software Engineer

- Delivered BFSI data migration, reconciliation, and technology control programs, progressing into cross-functional validation and delivery leadership responsibilities.

INDEPENDENT PRACTICE — APPLIED AI & DATA GOVERNANCE

Apr 2025 - Present

- Designed and shipped Golden Record RAG (solo build): an entity-resolution, survivorship, and lineage pipeline resolving 89,198 source records from 15 systems into 20,502 golden records, grounding a 35,000-chunk retrieval layer with hallucination validation and persona-scoped access - live demo and architecture published at ram-bala.com.
- Built and deployed MediGovern RAG (solo build): a governed healthcare prior-authorization assistant with a six-rule data-quality gate, explicit ABSTAIN on conflicting policy clauses, and immutable audit packets - production API live (Railway), open-source on GitHub; built with Anthropic Claude + MCP.
- Published Pipeline Pulse: a DMBOK2-aligned enterprise data platform simulation across all 17 knowledge areas (data-quality control center, lineage, MDM golden records, AI-governance model cards, RBAC/ABAC personas) - deliberately synthetic, demonstrating platform controls without live client data.
- Grew The Governed Data & AI Brief newsletter to 2,000+ subscribers; ran a Data Steward engagement via Toptal; earned DAMA CDMP Practitioner (credential 20023851). Independent practice, ongoing; immediately available for full-time senior leadership.

CERTIFICATIONS

DAMA CDMP Practitioner - Credential ID 20023851 (2026) | Fundamentals + Data Governance + Data Quality specialist exams
Additional: Anthropic Claude & MCP — 6 Certificates of Completion (Claude, Claude Code, MCP incl. Advanced) | Scrum Master (2025) | SAFe | Guidewire Data Hub & InfoCenter | 15 SPOT Awards | 11 LinkedIn Recommendations

EDUCATION

Master of Computer Applications (M.C.A.)

2005 - 2008

KGISL Institute of Information Management

B.Sc., Mathematics & Statistics

2002 - 2005

University of Calicut
